Message from the Secretariat

Dear Delegates,

Welcome to Sreenidhi Model United Nations 2026. In the Marvel Crisis Committee, you are not observing the aftermath of the Avengers Civil War: you are entering it. The Sokovia Accords have divided the heroes entrusted with protecting the world, and the next crisis will not wait for consensus.

You may represent a government, an enhanced individual, a security official or another influential figure. Your words, alliances and crisis directives can change the course of events. A decision to deploy, detain, negotiate or disclose information may save lives or create an entirely new threat.

Prepare to defend a position without becoming imprisoned by it. Tony Stark and Steve Rogers disagree over legitimate authority, but neither side is indifferent to human safety. The strongest delegates will understand competing loyalties, make difficult choices under uncertainty and recognise when the political situation has changed.

This guide establishes the MCU background and the major dilemmas of the Sokovia Accords. It does not script your crisis. Subsequent developments, intelligence and directives issued during committee will determine what happens next. Real-world legal principles appear only as useful comparisons, not as fictional MCU law.

Know your character. Know what they want, what they fear, whom they trust and what resources they can credibly command. Above all, remember that a crisis committee rewards decisions, not merely speeches.

Warm regards,
The Secretariat

05 Questions to Consider 12

A guide to public accountability, crisis governance, and the responsible exercise of extraordinary power.

01 Introduction to the Committee

The Marvel Crisis Committee is a fictional, fast-moving decision-making forum set in the Marvel Cinematic Universe. Its participants do not speak only as country delegates: they may embody enhanced individuals, senior officials, diplomats, security figures and other characters whose decisions carry personal, political and operational consequences.

Unlike an ordinary United Nations committee, the MCC may receive breaking crisis updates, confidential information and competing accounts of the same incident. Delegates may negotiate publicly while pursuing the priorities of their assigned role, subject to the conference rules and the powers expressly granted to that role. Speeches establish positions; directives and negotiated arrangements may translate those positions into action.

The present scenario centres on the Sokovia Accords and the fractured Avengers. The committee must address an apparent contradiction: the people most capable of averting extraordinary threats may also be capable of causing extraordinary harm. Every framework of supervision carries a corresponding danger of abuse, delay, corruption or failure.

The significance of a fantasy crisis committee

This committee is an exercise in political imagination anchored in a recognisable fictional world. Delegates should reason from the motivations, capabilities and relationships of their characters, rather than treating MCU figures as interchangeable representatives of states. A seemingly sensible regulation may be unacceptable to a particular character; a persuasive alliance may depend on past betrayal, unresolved grief or conflicting duties.

The Chair and crisis staff determine scenario updates and whether proposed actions are within a character's available powers. This guide does not confer any specific directive powers or establish a fixed crisis timeline beyond the aftermath of the Avengers Civil War.

02 Introduction to the Agenda

The agenda is the deliberation on the Sokovia Accords and the regulation of enhanced individuals, with special emphasis on government oversight, individual liberties and international security in the aftermath of the Avengers Civil War.

To some, the Accords are the overdue price of accountability. After New York, Washington, Sokovia and Lagos, governments have reason to fear a private group capable of intervening across borders with little outside scrutiny. To others, the Accords risk putting humanity's last line of defence under the control of politicians whose decisions may be compromised, self-interested or too slow.

The film Captain America: Civil War establishes that the Accords place the Avengers under the supervision of a United Nations panel, with deployment dependent on authorisation. It also establishes that opposition to the Accords becomes entangled with the pursuit of Bucky Barnes, the Vienna bombing, Helmut Zemo's manipulation and a devastating breakdown of trust among the Avengers.

The committee is therefore not being asked merely to endorse or reject a fictional legal instrument. Delegates must consider who can act in a new emergency, whether oversight can be trusted, how the divided Avengers might cooperate again, and how governments should respond when an enhanced individual refuses an order or an official abuses authority.

This is a fantasy crisis. The established MCU story is the starting point; new threats, missions and alliances are possible developments to be introduced through committee proceedings, not events that delegates should presume have occurred.

03 Explanation of the Agenda

3.1 Before the Accords: The Events That Changed the World

The Battle of New York revealed the scale of the threats facing Earth and established the Avengers as defenders willing to confront an alien invasion. The fall of S.H.I.E.L.D. exposed HYDRA's infiltration of a trusted security institution, leaving a lasting question about whether powerful oversight bodies can themselves be trusted. In Sokovia, the battle against Ultron ended in catastrophic destruction. The Lagos mission later caused civilian deaths even as the Avengers attempted to stop a dangerous attack.

These events have different causes and cannot simply be treated as proof that the Avengers always act irresponsibly. Yet together they help explain public demands for accountability, the grief of affected communities and the determination of governments to exercise control over enhanced operations.

3.2 What the Sokovia Accords Actually Change

The central on-screen feature of the Sokovia Accords is supervision of the Avengers by a United Nations panel, with decisions about deployment no longer left solely to the team. This is not the same as possessing a complete, publicly available code of regulations. The movies do not set out every registration procedure, legal sanction, appeals process or emergency exception that a delegate might wish to propose.

The crisis committee may consider amendments, exemptions, oversight bodies and safeguards, but these must be presented as proposals within the simulation unless the Chair provides them as binding scenario facts. A delegate should be able to identify the authority approving a mission, the consequences of refusal and the person answerable if an authorised operation goes wrong.

3.3 The Split: Stark, Rogers and Competing Loyalties

Tony Stark supports oversight, shaped in part by guilt over the destructive consequences of Avengers operations. James Rhodes also supports regulation, seeing accountability as compatible with responsible service. Steve Rogers fears surrendering moral and operational judgement to authorities whose priorities may change or whose institutions may be infiltrated. Sam Wilson remains closely aligned with Rogers, while Wanda Maximoff becomes central to the debate over restrictions placed on an enhanced person.

Natasha Romanoff approaches the dispute with a more pragmatic concern for preserving cooperation; T'Challa is drawn into the conflict through his father's death and his search for justice. Bucky Barnes is at once an individual whose autonomy has been compromised and the subject of suspicion, pursuit and manipulation. Delegates must research their own roles carefully: allegiance does not eliminate ambiguity, and a character's relationship to the Accords may evolve during a crisis.

3.4 The Vienna Bombing and the Cost of False Attribution

The bombing at Vienna kills King T'Chaka and leads to the apparent implication of Bucky Barnes. Helmut Zemo's manipulation exposes the danger of acting on incomplete evidence. For this committee, the episode is a warning that urgent security decisions can be driven by deception, grief and mistaken assumptions.

Delegates may be asked to respond to accusations involving enhanced powers, classified material or conflicting intelligence. A credible response should distinguish suspicion from proof; identify who controls the investigation; and avoid making emergency punishment a substitute for finding the truth.

3.5 Government Control Versus Individual Freedom

Should someone who can level a building be treated differently from someone who cannot? The question is more difficult than it appears. Mandatory identification, movement restrictions, detention and surveillance may be justified by officials as protective measures, but they also create risks of political targeting, discriminatory treatment, coercion and misuse of sensitive information.

Delegates should consider whether different rules apply to a person born with powers, a person altered against their will and a person choosing to use advanced technology. Any suggested control must explain its justification, scope, decision-maker, safeguards and review procedure. A system that claims to protect the world but permits indefinite detention without challenge may create its own crisis.

3.6 The Raft, Detention and the Meaning of Accountability

The imprisonment of several members of Rogers's team on the Raft underscores the personal consequences of the conflict. The committee should examine what due process, fair treatment, independent oversight and access to review could look like when enhanced individuals are detained for refusing a regulatory regime or acting without authorisation.

Accountability must also run in the opposite direction. If officials misuse the Accords or knowingly authorise a reckless mission, who can investigate them? If civilians suffer harm, who provides assistance and compensation? A credible framework should not place all responsibility on the individual sent into danger while exempting those who gave the orders.

3.7 Emergency Powers: What Happens When There Is No Time to Vote?

Imagine an unidentified object descending over a populated city, or a laboratory breach releasing a dangerous enhanced threat. These are examples of potential crisis developments, not established events in the conference scenario. If a supervisory panel cannot assemble in time, must an Avenger remain idle? If an Avenger acts without permission and civilians are harmed, can urgency excuse every decision?

Delegates can explore rapid authorisation, limited emergency exceptions, immediate notification, retrospective review and automatic expiry of extraordinary powers. The central test is whether a

procedure protects the public while enabling prompt and proportionate action.

3.8 International Security in a World of Enhanced Individuals

The existence of enhanced individuals changes the assumptions behind national defence, intelligence and crisis diplomacy. States may compete for access to powerful allies or technologies, while others may fear intervention without their consent. Accords administered by a multinational panel may create legitimacy, but only if their decisions are seen as reasonably impartial and operationally competent.

Enhanced abilities also complicate ordinary ideas of deterrence: a single individual might cause damage that would otherwise require a military operation, and a single act of sabotage could be misread as an attack by an entire nation. Delegates should distinguish the pursuit of international cooperation from an unchecked mandate to deploy enhanced personnel wherever politically convenient.

3.9 A Crisis Committee Is Built Around Decisions

A successful intervention in the MCC need not be a speech about the ideal world. It might be a narrowly drafted emergency protocol, a compromise between rival factions, a fact-finding directive, a negotiated release agreement, an independent oversight proposal, or a contingency plan to evacuate civilians. It should also anticipate consequences: who must agree, what information is missing, what resources are required and who will resist?

Delegates should approach information as dynamic. A revelation may undermine a long-standing alliance; a new threat may require cooperation between former enemies; an apparently lawful action may be disastrous if its factual premise is false. Delegates should be ready to adjust strategy without abandoning their character's established motivations.

3.10 Real-World Analogies: Useful, but Not MCU Law

Human-rights concepts such as due process, privacy and proportionality, and public-law concepts such as institutional accountability, can provide useful intellectual tools. The United Nations Charter and international humanitarian law are likewise relevant as comparisons when considering sovereign authority, cross-border force and civilian protection. They do not automatically provide the fictional procedural rules of the Sokovia Accords.

For research, prioritise Captain America: Civil War and official Marvel summaries for MCU events, distinguish the film continuity from different Civil War narratives in the comics, and use real-world sources only to sharpen arguments about institutional design and civil liberties.

3.11 Preparing for the First Crisis Update

Before committee, delegates should prepare a short character dossier identifying four things: what their role knows at the starting point; whom they trust or oppose; what they hope to achieve concerning the Accords; and what actions their role could plausibly take. A government official may have institutional influence but limited field capacity. An Avenger may act quickly but lack political legitimacy. Neither can credibly claim every resource in the MCU.

Develop at least one proposal for immediate safety and one for durable governance. Consider whom you would contact after a new attack, how you would validate intelligence, whether your character would accept temporary cooperation and what compromise they could realistically defend. Consult the conference Rules of Procedure for the permissible form of crisis directives and communications.

04 Reference Links and Resources

The following references are retained from the original committee document. The first two provide MCU source material; the remaining resources offer comparative real-world legal and institutional perspectives. Delegates should distinguish fictional canon from international legal authorities.

01. Marvel Cinematic Universe — Official Marvel Website

Useful for researching official character profiles, films, storylines, and background information relevant to the Sokovia Accords and the Avengers Civil War.

02. Captain America: Civil War — Marvel Studios

Useful for reviewing the film's central conflict, the disagreement over the Sokovia Accords, and the differing positions of the characters involved.

03. United Nations

Useful for researching international cooperation, the UN Charter, international peace and security, and the principles underlying multilateral decision-making.

04. United Nations Security Council

Useful for understanding international oversight, decision-making procedures, accountability, and the challenges of balancing national interests with collective security.

05. Office of the United Nations High Commissioner for Human Rights (OHCHR)

Useful for researching human rights, individual liberties, privacy, due process, and safeguards against arbitrary government action.

06. International Committee of the Red Cross (ICRC)

Useful for examining civilian protection, proportionality, accountability, and the application of international humanitarian law in situations of armed conflict.

07. International Criminal Court (ICC)

Useful for understanding the principles and limitations of international criminal accountability. The ICC prosecutes individuals for specific crimes within its jurisdiction; it is not a general oversight authority for enhanced individuals.

08. Reuters

Useful for current reporting on government surveillance, emergency powers, civil liberties, international security, and debates concerning technological oversight. These subjects can provide real-world comparisons for the fictional agenda.

09. Council of Europe — Human Rights

Useful for research on human rights protections, the rule of law, and the legal safeguards that can constrain governmental authority.

10. United Nations Office for Disarmament Affairs (UNODA)

Useful for broader research on international security, emerging technologies, arms control, and the challenges of regulating capabilities that may affect international peace.

05 Questions to Consider

Consider the following questions from the perspective of your assigned character or institution. They are designed for negotiation, rapid decision-making and crisis action—not simply for theoretical debate.

01. If the crisis staff announces an imminent threat while the UN oversight panel is unavailable, what exactly would your character do first?

02. Would your character sign, amend, suspend or reject the Sokovia Accords—and what would persuade them to change position?

03. What is your character's strongest argument for or against United Nations supervision of Avengers deployments?

04. How would your delegation respond if a new attack were attributed to an enhanced individual on disputed evidence?

05. Should the authorities disclose intelligence that could clear a suspect if doing so risks revealing classified operations?

06. What procedural rights should Bucky Barnes or another potentially compromised enhanced individual receive?

07. Could your character negotiate an agreement between Tony Stark and Steve Rogers? Which concession would each side need?

08. Who should be authorised to mobilise an enhanced individual across a national border during an emergency?

09. What safeguards would prevent an oversight panel from selecting missions for political advantage?

10. How should the committee respond if an authorised enhanced mission causes civilian casualties?

11. Should detainees held after the Avengers Civil War be offered independent review or conditional release?

12. What should happen if a character refuses an order believed to be dangerous or morally unacceptable?

13. How could a secure enhanced-individual register be misused, and which safeguards would your character insist upon?

14. How should the committee treat a person with involuntary powers differently from a person using chosen technological equipment?

15. Which characters or institutions could credibly investigate the aftermath of Vienna, Lagos or another disputed incident?

16. What emergency exception would permit unilateral action without making the Accords meaningless?

17. How can the Avengers cooperate on a common threat without first resolving every ideological disagreement?

18. What resources can your own role actually command, and what would require the cooperation of another delegate?

19. What is the greatest foreseeable unintended consequence of your character's preferred policy?

20. If fresh intelligence proved your present allies wrong, would you expose the truth, negotiate privately or change sides—and why?
